

# My intentions for GPG keys

There are issues that concern me and this is how I plan to use GPG keys to address some of them.

- 1 . People masquerading as myself and supplying modified, possibly harmful, copies of my work.

To guard against that I intend to digitally sign my work, or at least fingerprints of my work.

- 2 . People masquerading as myself and publishing posts, or opinions as though they are mine.

To guard against that I intend to digitally sign my posts.

- 3 . People masquerading as myself when corresponding with people who know me.

To guard against that I intend to digitally sign my email.

- 4 . Sharing a secret of some kind with other people, but using untrusted infrastructure to deliver that.

To guard against that I intend to encrypt such items using GPG encryption keys.
