

# Example converted from markdown

The .rst source here was converted from markdown using [Convert MD to RST](#)

I tried it on a small test file, this is the result:

Markdown Image Inline:

![ogopogo](images/ogopogo.jpg "Canada's Ogopogo Monster")

ogopogo

## FOOTNOTES

Footnotes[^1] have a label[^foobar] and the footnote's content.

[^1]: This is a footnote content. [^foobar]: A footnote on the label: "foobar".

Footnotes <sup>1</sup> have a label <sup>2</sup> and the footnote's content.

## TABLES

Col 1 head | Col 2 head ----- | ----- row 1 col 1 | row 2 col 1 row 2 col 1 | row 2 col 2

Col 1 head	Col 2 head
row 1 col 1	row 2 col 1
row 2 col 1	row 2 col 2

---

<sup>1</sup> This is a footnote content.

<sup>2</sup> A footnote on the label: "foobar".
